Full-stack SDE with 1.5+ years shipping production healthcare and insurance software at Policybazaar Group — React and React Native on the front, Java/.NET REST APIs behind. Also builds AI-powered products and agentic tooling: a grounded-RAG chatbot, a Jira-ticket-to-PR automation pipeline, and custom Claude Code skills and hooks used daily at work.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Java, SQL, HTML5, CSS3

Frontend: React, React Native (Android & iOS), Redux Toolkit, React Router, Tailwind CSS, Vite, Webpack

Backend: Node.js, Express, .NET, REST APIs, JWT auth, role-based access control, MySQL, MongoDB

AI & Automation: LLM APIs (Anthropic Claude, Google Gemini), retrieval-augmented generation (RAG), prompt design, agentic coding workflows (Claude Code — custom skills, hooks, slash commands), Git automation

Testing & Tools: Vitest, Supertest, React Testing Library, Git, Bitbucket, Postman, DBeaver, Jira

EXPERIENCE

Docprime (Policybazaar.com)

Mar 2026 – Present

Software Development Engineer 1

Gurugram, India

- Ship production features for the Docprime consumer healthcare app — **live on the Play Store and App Store** — Android and iOS from a single **React Native** codebase, screen to **Java** REST API.
- Built **screen-level phone-number verification** inside a partner web-view flow, and simplified the auth path by removing redundant phone-verification fallbacks in the SSO flow.
- Shipped **refund-flow changes across three releases**, a new payment-scheme integration, consultation **follow-up logic that correctly handles cancelled consultations**, and post-visit experience ratings on lab-order and pharmacy cards.
- Use **Claude Code with custom skills and pre-commit hooks** (commit linting, PR descriptions, cross-platform checks) in daily work; one hook caught a release-blocking hardcoded-config bug before it shipped.

PB Health

Jul 2025 – May 2026

Software Development Engineer 1

Gurugram, India

- Built the **Self Check-in Kiosk** frontend from an empty repository — architecture, screen flows, form state, API integration — letting OPD patients check themselves in instead of queueing at the front desk.
- Owned the **Inventory Management** module end to end: requirements, UI, API contracts agreed with backend, and production rollout.
- Delivered features across **OPD and IPD** hospital workflows in **React, TypeScript and Tailwind CSS**, agreeing REST contracts and edge cases with backend before implementation.

Policybazaar for Business

Jan 2025 – Jul 2025

Frontend Developer

Gurugram, India

- Built **Enrollment** features across the full stack — **React, TypeScript, Redux** on the front with **.NET** APIs and **MySQL** behind — for revenue-critical group-insurance flows still live in production.
- Debugged and extended a large production insurance codebase from the first month, shipping fixes within sprint cycles alongside product, design and backend teams.

PROJECTS

DualMind | *React 19, TypeScript, Anthropic SDK, Gemini API, MongoDB, Vercel*

[GitHub](#)

- Dual-mode chatbot (Recruitment Assistant + Employee Help Desk) with a **client-side RAG pipeline**: scored retrieval picks the top-5 knowledge-base entries, then **Claude or Gemini answers only from those excerpts with source citations** — so it cannot invent policies.
- Bring-your-own-key design: keys live only in the browser's localStorage; **any failure (no key, rate limit, network) silently falls back to the built-in rule engine** (stopword removal, stemming, synonym map, scored retrieval).

StudyNotion v2 | *TypeScript, React, Express, MongoDB, JWT*

[GitHub](#)

- Solo ground-up rebuild of a team-of-four course project — v2 shares the idea, none of the code. Instructor course builder with **draft/publish workflow, lesson CRUD with validated reordering, and per-resource ownership checks**.
- Ran a **security review of my own code and fixed four issues** — a ReDoS in search, an enrolled-student ID leak, a silently defaulting JWT secret, missing rate limiting — each with a regression test that fails if the fix is reverted.
- 229 automated tests** (Vitest, Supertest, in-memory MongoDB) across API and UI, plus a separate typecheck gate — a green suite alone does not prove the code compiles.

AI Ticket Pilot (with a colleague) | *LLM agents, Jira, Bitbucket, Jenkins, Telegram*

- Agentic developer pipeline that picks up a Jira ticket and drives it toward a mergeable change — plans the implementation, raises the Bitbucket PR, triggers Jenkins builds, and reports status and APK artifacts over Telegram.

EDUCATION

ICFAI University

2021 – 2025

B.Tech, Computer Science and Engineering — CGPA 9.05/10.00

Jaipur, India

- Finalist, Policybazaar Hackathon 3.0** (2025) — PII Interceptor: detects and blocks PII in flight; team of 5.
- Vice President & Discipline Head**, Student Council (2024).
